

Case Study

Eco-Index iPad Dashboard

Functional Context & Requirement

- A Mid & upper tier Leadership of an apparel conglomerate required the ability to visualize and compare the environmental performance of all manufacturing plants and facilities

Our Solution & Approach

- Interactive iPad application for visualization and comparison
- Index assigned based on the plant's performance in Air, Water & Earth
- Metrics defined to assess environmental impact
- A unique scoring system defined for each metric
- Web based backend for data collection

Impact

- A benchmark in environmental performance, adopted by the group
- Ability to change/adopt processes in manufacturing & supply chain management that improves environmental performance
- Showcase to clients, the commitment & honesty towards the areas impacting the environment, in manufacturing process
